New Score of Medicare Buy-In Proposal from AAF’s Center for Health and Economy

ANDREW EVANS | NOVEMBER 13, 2019

H&E’s key findings:

- **Premium Impact:** Largely because of the bill’s creation of a reinsurance fund and reintroduction of cost-sharing reduction payments to insurers, premiums paid would fall by 4 to 12 percent in all metal levels, with the exception of single-coverage Gold plans – the category that includes the Medicare buy-in plans;
- **Coverage Impact:** The size of the insured population would rise marginally within the individual marketplace, with these increases declining over time relative to the baseline;
- **Medicare Buy-In Enrollment:** Nearly 300,000 people would be expected to buy into Medicare in its first year, although this number is expected to decrease to less than 200,000 by the year 2029; and
- **Budget Impact:** Federal spending would increase by $184 billion between 2020 and 2029, and the bill does not include any offsetting increases in revenue.
