The Consequences of the Fiduciary Rule

MEGHAN MILLOY | APRIL 15, 2017

The American Action Forum (@AAF) released a new infographic detailing the consequences of the fiduciary rule for consumers. According to the research, the fiduciary rule is the second most expensive non-environmental regulatory rule since 2005 and could end up costing consumers an additional \$46.6 billion. AAF goes on to find that the fiduciary rule could reduce operating margins on commission-based IRAs by 24 to 36 percent. [Read more here.](#)

THE CONSEQUENCES OF THE FIDUCIARY RULE

The fiduciary rule is the most expensive regulatory action of 2016 and the second most expensive non-environmental rule since 2005.

It has the potential to increase consumer costs by :

\$46.6 BILLION

OR

\$813
per account
(annually)

+

\$1,500

in duplicative fees will be added for retirement savers that have already paid a fee on their accounts

Based on a minimum balance requirement of \$30,000 :

28 MILLION

Americans will be out of managed retirement accounts completely

Wealth management firms covered under the fiduciary rule will see annual litigation costs up to :

\$150 MILLION

as a result of class-action lawsuits from the Best Interest Contract Exemption and wasted resources

The Department of Labor's fiduciary rule is well-intended, but the costs it imposes, especially to low- and middle-income consumers, are **too high to justify** implementing the rule as it is currently written.
