Perspective: What's the safest way to transport oil?

CATRINA RORKE | APRIL 3, 2013

Key Facts

- 1 Modest pipeline = 75 2,000-barrel tank cars per day
- 2012: 128 'significant' pipeline spill incidents, resulting in 53,134 barrels spilled; 415 barrels per spill, on average.
- 12,000 barrels of oil and water mixture recovered from Pegasus site (not sure which portion is oil, which is water).
- 80 of every 1 billion gallons transported via rail spill; 38 of every 1 billion gallons transported via pipeline spill
