ICYMI: Cutting Carbon Emissions Without Killing Economic Growth

PATRICK HEFFLINGER | AUGUST 1, 2018

In an op-ed featured in [The Hill](#), Douglas Holtz-Eakin writes on the need to reduce carbon emissions while maintaining economic growth. See excerpt below:

“There are lots of bad ways to reduce carbon emissions. The worst is heavy, top-down, command-and-control regulation, according to new research from the American Action Forum. This kind of intrusive micromanaging of even homeowners associations was one reason that the Waxman-Markey legislation pushed by President Obama failed to make it through Congress. It re-emerged in executive action as the Clean Power Plan, only to have [President Trump](#) roll it back. The regulatory approach has too many economic dangers to be palatable in any form.”
