Health and Economy Baseline Estimates

STEPHEN PARENTE | MAY 18, 2022

CENTER FOR HEALTH AND ECONOMY

A Research Initiative of the American Action Forum

In the midst of the 2022 plan year, the health insurance market continues to see increasing and unpredictable costs, large numbers of uninsured individuals, and inadequate access to care. The American Action Forum's [Center for Health and Economy](#) (H&E) is dedicated to assessing the impact of proposed reforms that attempt to address these issues. The following report details the most recent updates to the H&E baseline estimates of insurance coverage, federal budgetary impact, plan choice, and the premium landscape of health insurance for Americans under the age of 65.

KEY FINDINGS:

- It is estimated that the individual market includes 14 million members in 2022, with 11 million lives covered through subsidized insurance offered in the Health Insurance Marketplace. The total size of the individual market is estimated to decline throughout the budget window—sinking to 9 million in 2032.
- As premiums and health care costs rise, plans chosen in the individual market are expected to shift toward lower cost options. Highly subsidized enrollment in Silver plans is projected to fade as a percentage of enrollment on the individual market, while enrollment in Bronze plans grows among both subsidized and unsubsidized consumers.
- The health insurance coverage provisions under current law for the non-elderly are estimated to increase federal outlays by \$7.06 trillion from 2022 through 2032.

INSURANCE COVERAGE

H&E estimates there are 249 million non-elderly US residents with health insurance in 2022—90 percent of the total non-elderly population. Estimates of health insurance coverage encompass four primary categories: the individual market, employer sponsored insurance, Medicaid, and other public insurance. The individual market is divided into two subsets: subsidized and unsubsidized coverage. Subsidized coverage is purchased through the Health Insurance Marketplace, and unsubsidized coverage is comprised of similar insurance plans purchased either directly from the insurer (represented in Other Non-Group Insurance) or through the Marketplace without

financial assistance. H&E makes no distinction between unsubsidized enrollees through the Marketplace and households that purchase individual market insurance directly from an insurer. Estimates concerning Medicaid also include beneficiaries of the Children's Health Insurance Program. Other public insurance is primarily comprised of Medicare coverage for disabled persons, but also includes Tricare, the Indian Health Service, and other federal health care programs for specific populations.

Table 1. Health Insurance Coverage (Millions)

2022 2023 2024 2025 2026 2027 2028 2029 2030 2031 2032

¹ Individual Market and Total Insured numbers may not equal the sum of other sub-categories due to rounding.

² Other Public Insurance includes under-65 Medicare enrollment.

³ All insurance coverage estimates refer only to the under-65 population.

The enrollment for the Health Insurance Marketplace in 2022 is partially calibrated to the effectuated enrollment reported by the Centers for Medicare and Medicaid Service (CMS) for the 2021 program year. In 2022, we estimate there are 27 million uninsured. This is approximately 1 million less than our earlier estimates due to the impact of the COVID-19 relief bill (The American Rescue Plan) signed into law in 2021 with enhanced premium subsidies in 2021 and 2022. By 2023, the number of uninsured, non-elderly Americans is projected to increase to 28 million—10 percent of the total non-elderly population. The decrease in insured Americans is primarily the result of 2023 premium increases in the individual market as the enhanced subsidies sunset. The average population of non-elderly Medicaid beneficiaries is estimated to be 72 million in 2022 and will rise to 74 million by 2032.^[1] These estimates are subject to the uncertainty of each state’s decision regarding Medicaid expansion.

H&E does not make any assumptions about future state take-up of the Medicaid expansion due to the many variables involved in projecting the magnitude of the effects of potential future expansions. Because of this, the Medicaid enrollment and spending reflected in this baseline only reflect the projected costs and enrollment of the Medicaid program if it were to remain as it currently is.

The individual market is estimated to decline from 14 million covered lives in 2022 to 9 million in 2032, driven by premium increases in the Marketplace. The decrease in coverage through the individual market is in part offset by an increase in those insured through Medicaid.

As seen in Table 1, the number of individuals with unsubsidized, individual market insurance is expected to continue at the same level at 4 million from 2022 to 2032 with variations no greater than 250,000 to 500,000. Rising costs and higher income contributions for subsidized enrollees are estimated to lead to higher uninsured numbers later in the analysis period.

PREMIUMS

Estimates of the subsidy-eligible premiums available in the Marketplace are calculated using publicly available data on plans offered in the 33 Federally Facilitated Marketplaces. Premium estimates for unsubsidized health insurance are calculated from a sample of plans available through the Robert Wood Johnson Foundation.^[2] In both cases, H&E uses the default age rating curve put forth by the Department of Health and Human Services and by individual states to impute the applicable premium for a household. For simplification and comparability, H&E uses a standard family size of four (two adults and two children) when estimating family premiums. Subsidy payments and tax revenue are adjusted for the appropriate average family size in budget impact estimates.

Table 2. Average Premiums in the Individual Market¹

		2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032
Single Coverage	Platinum	8,400	8,500	8,800	9,200	9,500	9,900	10,300	10,700	11,100	11,500	12,000
	Gold	7,500	7,500	7,800	8,100	8,500	8,800	9,200	9,600	10,000	10,400	10,800
	Silver ²	7,000	7,200	7,500	7,800	8,200	8,500	8,900	9,300	9,600	10,100	10,500
	Bronze	5,900	5,900	6,200	6,400	6,700	7,000	7,300	7,600	7,800	8,200	8,500

	Gold	17,500	16,800	17,300	18,000	18,600	19,300	20,000	20,800	21,400	22,300	23,300
	Silver ²	15,700	15,900	16,600	17,300	18,000	18,800	19,500	20,400	21,200	22,300	23,300
	Bronze	14,800	14,300	14,700	15,300	15,700	16,300	16,800	17,400	17,800	18,500	19,200
	Catastrophic	8,100	9,400	9,800	10,300	10,700	11,100	11,600	12,100	12,500	12,900	13,300

¹ The Individual Market refers to the commercial, non-group market and includes sales of insurance within the Marketplace and direct sales by insurers.

² Silver plans offered to low-income households receive cost-sharing benefits that alter the effective premium relative to un-assisted Silver plans.

³ Family coverage estimates are based on a family size of four persons.

Subsidized insurance plans offered in the Marketplace are divided into four categories— Platinum, Gold, Silver, and Bronze—that correspond to four approximate actuarial values—90 percent, 80 percent, 70 percent, and 60 percent. The actuarial value refers to the expected percentage of annual medical expenses covered by the insurance plan.

For 2023 to 2032, eligible households with incomes up to 400 percent of the Federal Poverty Level (FPL) may purchase subsidized coverage with household contribution capped at a specified percentage of household income that ranges from 2.01 to 9.56 percent, depending on income. For 2022, there is no income cap on eligibility and the contribution limits as a percentage of household income range from zero to 8.5 percent, depending on income. A federal subsidy pays the remaining portion of the premium that is not covered by the household’s specified income contribution. This specified income contribution is also subject to annual increases if the annual increase in health insurance costs exceeds a measure of household income growth.

Table 3. Average Subsidized Premiums in the Individual Market¹

		2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032
Single Coverage	Platinum	5,000	5,300	5,500	5,600	5,700	5,800	6,000	6,100	6,200	6,400	6,500

	Silver ²	1,600	2,000	2,100	2,100	2,200	2,200	2,300	2,300	2,300	2,300	2,400
	Bronze	1,200	1,200	1,200	1,200	1,100	1,100	1,100	1,100	1,000	1,000	1,000
Family Coverage ³	Platinum	10,000	10,000	10,100	10,200	10,300	10,500	10,500	10,800	11,000	11,200	11,400
	Gold	6,500	6,700	6,700	6,600	6,600	6,700	6,600	6,700	6,700	6,800	6,800
	Silver ²	2,500	3,000	3,000	3,100	3,100	3,200	3,100	3,200	3,200	3,300	3,200
	Bronze	2,300	1,800	1,800	1,600	1,500	1,500	1,400	1,300	1,300	1,200	1,100

¹ The Individual Market refers to the commercial, non-group market and includes sales of insurance within the Marketplace and direct sales by insurers.

² Silver plans offered to low-income households receive cost-sharing benefits that alter the effective premium relative to un-assisted Silver plans.

³ Family coverage estimates are based on a family size of four persons.

It is important to note that, because of additional cost-sharing assistance, the plan designs categorized as Silver vary significantly in actuarial value across different income categories. H&E estimates the unsubsidized

premiums for these high-value Silver plans using the true actuarial value of the plan, rather than the Silver plan price.

Unsubsidized insurance plans, purchased in the Marketplace or directly from an insurer, are similar in design and price to those eligible for subsidies. The ACA requires that all health insurance plans meet certain requirements to certify as qualified coverage.

PLAN CHOICE

H&E assumes an underlying health insurance cost growth of 5 percent throughout the rest of the ten-year window as premium increases were above 5 percent between 2014 and 2019 and are projected to increase at similar levels moving forward.^[3] Actual year-over-year premium growth estimates vary as a result of changes in the enrollment mix and other factors. Due to growing applicable income contribution rates, subsidized premium growth for some plan designs is expected to exceed the underlying health insurance growth rate.

Table 4. Plan Choice Distribution in the Individual Market¹

	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032
Platinum	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%
Gold	3%	3%	3%	3%	3%	3%	3%	3%	3%	3%	3%
Silver ²	56%	55%	53%	52%	49%	47%	45%	43%	42%	41%	40%
Bronze	31%	29%	30%	31%	34%	34%	36%	37%	38%	38%	39%
Catastrophic ³	9%	12%	13%	13%	14%	15%	16%	16%	17%	18%	19%
Total Enrollment (millions)	14	13	12	12	11	11	10	10	9	9	9

¹ The Individual Market refers to the commercial, non-group market and includes sales of insurance within the Marketplace and direct sales by insurers.

² Silver plans include plans that receive cost-sharing assistance.

³ Catastrophic plans include short term and limited duration health plans.

H&E uses the subsidized and unsubsidized Marketplace enrollment in each metal level after the first year to calibrate plan preferences in the individual market and estimate plan choices throughout the ten-year analysis window.

H&E estimates that the large enrollment in Silver plans in 2022 among subsidized insurance plans will give way to higher enrollment in Bronze plans as premiums rise and consumers with less generous subsidy amounts adjust to higher premiums. The large majority of Silver plan enrollment is estimated to be largely comprised of households eligible for extra cost-sharing benefits. As the market grows to include more households that are eligible for premium credits the distribution of subsidized enrollment among the four metal levels is expected to become less evenly distributed later in the budget window.

Table 5. Plan Choice Distribution in the Health Insurance Marketplace

	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032
Platinum	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%	0%
Gold	3%	2%	3%	3%	3%	3%	3%	3%	3%	3%	3%
Silver ¹	65%	70%	68%	66%	63%	62%	59%	57%	57%	56%	56%
Bronze	32%	28%	30%	31%	34%	35%	38%	40%	40%	41%	42%
Total Enrollment (millions)	11	8	8	8	7	7	6	6	6	5	5

¹ Silver plans include plans that receive cost-sharing assistance.

Beyond 2022, lower cost insurance plans are estimated to gain market share, shifting away from more generous plans in response to the steadily rising cost of health insurance. Throughout the budget window, Silver plan enrollment is expected to dominate the marketplace as cost sharing benefits are only available for Silver plans in the Health Insurance Marketplace. As time passes and premiums rise, however, enrollment in Bronze plans are expected to increase.

BUDGET

H&E estimates the impact on the federal budget of the major health insurance coverage provisions of current law with regards to the non-elderly population. Budget impact estimates do not include estimates for non-ACA tax expenditures encoded in current law, such as the employer sponsored health insurance tax expenditure.^[4]^[5]

Table 6. Cost of Current Law Coverage Provisions (billions)¹

2022-
2032

Subtotal	548	551	571	593	615	637	660	684	707	734	760
Net Budgetary Impact³	-548	-551	-571	-593	-615	-637	-660	-684	-707	-734	-760

¹ Cost estimates refer only for the under-65 population.

² Positive values denote increases in spending; negative values denote decreases in spending.

³ Positive values denote surplus; negative values denote deficit.

Medicaid coverage and expenditure estimates are calculated based on the number of states that had chosen to implement Medicaid expansion by January 1, 2022. These predictions are sensitive to future state-level decisions on expansion as well as new program waivers that alter the design of a state's Medicaid program. Over the decade spanning between 2022 and 2032, H&E estimates that non-elderly coverage provisions under current law will cost \$7.06 trillion.

PRODUCTIVITY AND ACCESS

The Medical Productivity Index (MPI) is designed to reflect the expected gains in health status in return for medical expenditures. Plan designs that encourage patients to consider the price of treatment when making health care decisions, such as high-deductible plans, are ascribed high MPI scores and vice versa. The index ranges from a low of 1.0 to a high of 4.0.

The Provider Access Index (PAI) is designed to reflect the availability of primary and specialty physicians and facilities. Plans with large networks, such as Platinum plans offered in the individual market, are ascribed high scores for providing exceptional access. Bronze and other low-cost plans that afford access only to limited networks are ascribed low PAI scores. The index ranges from a low of 1.0 to a high of 5.0.⁴

Table 7. Medical Productivity Index

CHANGES FROM PREVIOUS BASELINE ESTIMATES

As an organization, H&E is constantly reevaluating the assumptions and technical methods that are used to

create baseline and proposed estimates of health insurance coverage provisions under current law. This publication is the eleventh comprehensive baseline report, and the ninth to include detailed estimates on the net budgetary impact of the ACA and Medicaid for individuals under 65.

For this baseline, H&E updated the under-65 microsimulation model. Just like the model used in previous estimates, the new under-65 model employs micro-data available through the Medical Expenditure Panel Survey to analyze the effects of health policies on the health insurance plan choices of the under-65 population and interpret the resulting impact on national coverage, average insurance premiums, the federal budget, and the accessibility and efficiency of health care. The updated model utilizes recent integrated private health insurance choice data that allows H&E to make improved predictions regarding the individual marketplace.

UNCERTAINTY IN PROJECTIONS

The Center for Health and Economy uses a peer-reviewed micro-simulation model of the health insurance market to analyze various aspects of the health care system. And as with all economic forecasting, H&E estimates are associated with substantial uncertainty. While the estimates provide good indication on the nation's health care outlook, there are a wide range of possible scenarios that can result from policy changes, and current assumptions are unlikely to remain accurate over the course of the next ten years.

Aside from the potential policy changes, premium increases in the individual market are a substantial area of uncertainty in this report. In May 2021 it was reported by the Centers for Medicare and Medicaid Services that new enrollment during the Special Enrollment Period combined with additional subsidies for the Marketplace in 2021 and 2022 plans years yielded nearly one million new enrollees.^[6] Our estimates reflect this impact as well, but it is important to note that our estimates are net enrollment for an annual period as opposed to a quarterly report of new plan enrollment. Premiums could also decrease if Congress were to appropriate funds required by law to assist insurers beyond plan year 2022 with the burden of offering plans with increased cost sharing assistance.

[1] H&E's method for estimating Medicaid enrollment was also part of the under-65 model update. As a result, Medicaid enrollment is higher than in previous baselines, accounting for all of the under-65 Medicaid population with the exception of those that are dually eligible for Medicare and Medicaid.

[4] The CBO estimates that the tax exclusion for employer sponsored insurance will cost \$3.4 trillion over 10 years. See *Distribution of Major Tax Expenditures in the Individual Income Tax System*, Congressional Budget Office, May 2013, at: http://www.cbo.gov/sites/default/files/cbofiles/attachments/43768_DistributionTaxExpenditures.pdf

[5] In past baselines, H&E has included various estimates related to the employer sponsored insurance market that included: the excise tax on high-cost employer sponsored plans, Medical Productivity in the employer

marketplace, and Provider Access in the employer marketplace. These were left out of this baseline due to the update of the under-65 model.
